## THE PVD PROCESS EXPLAINED

### PVD - PHYSICAL VAPOUR DEPOSITION

PVD is a technique that applies colour on an atomic level to a base surface inside a vacuum chamber. This process physically changes the original base material to the desired colour composition, meaning that the surface won't wear off or degenerate over time.

PVD is one of the most durable colouring technologies being up to 3 times harder and 10 times more scratch resistant than the alternative surface options.

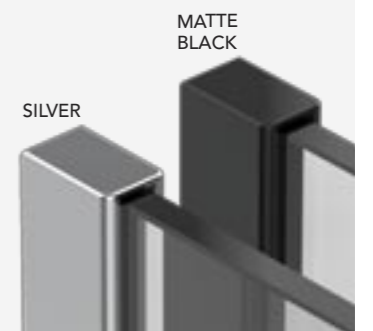

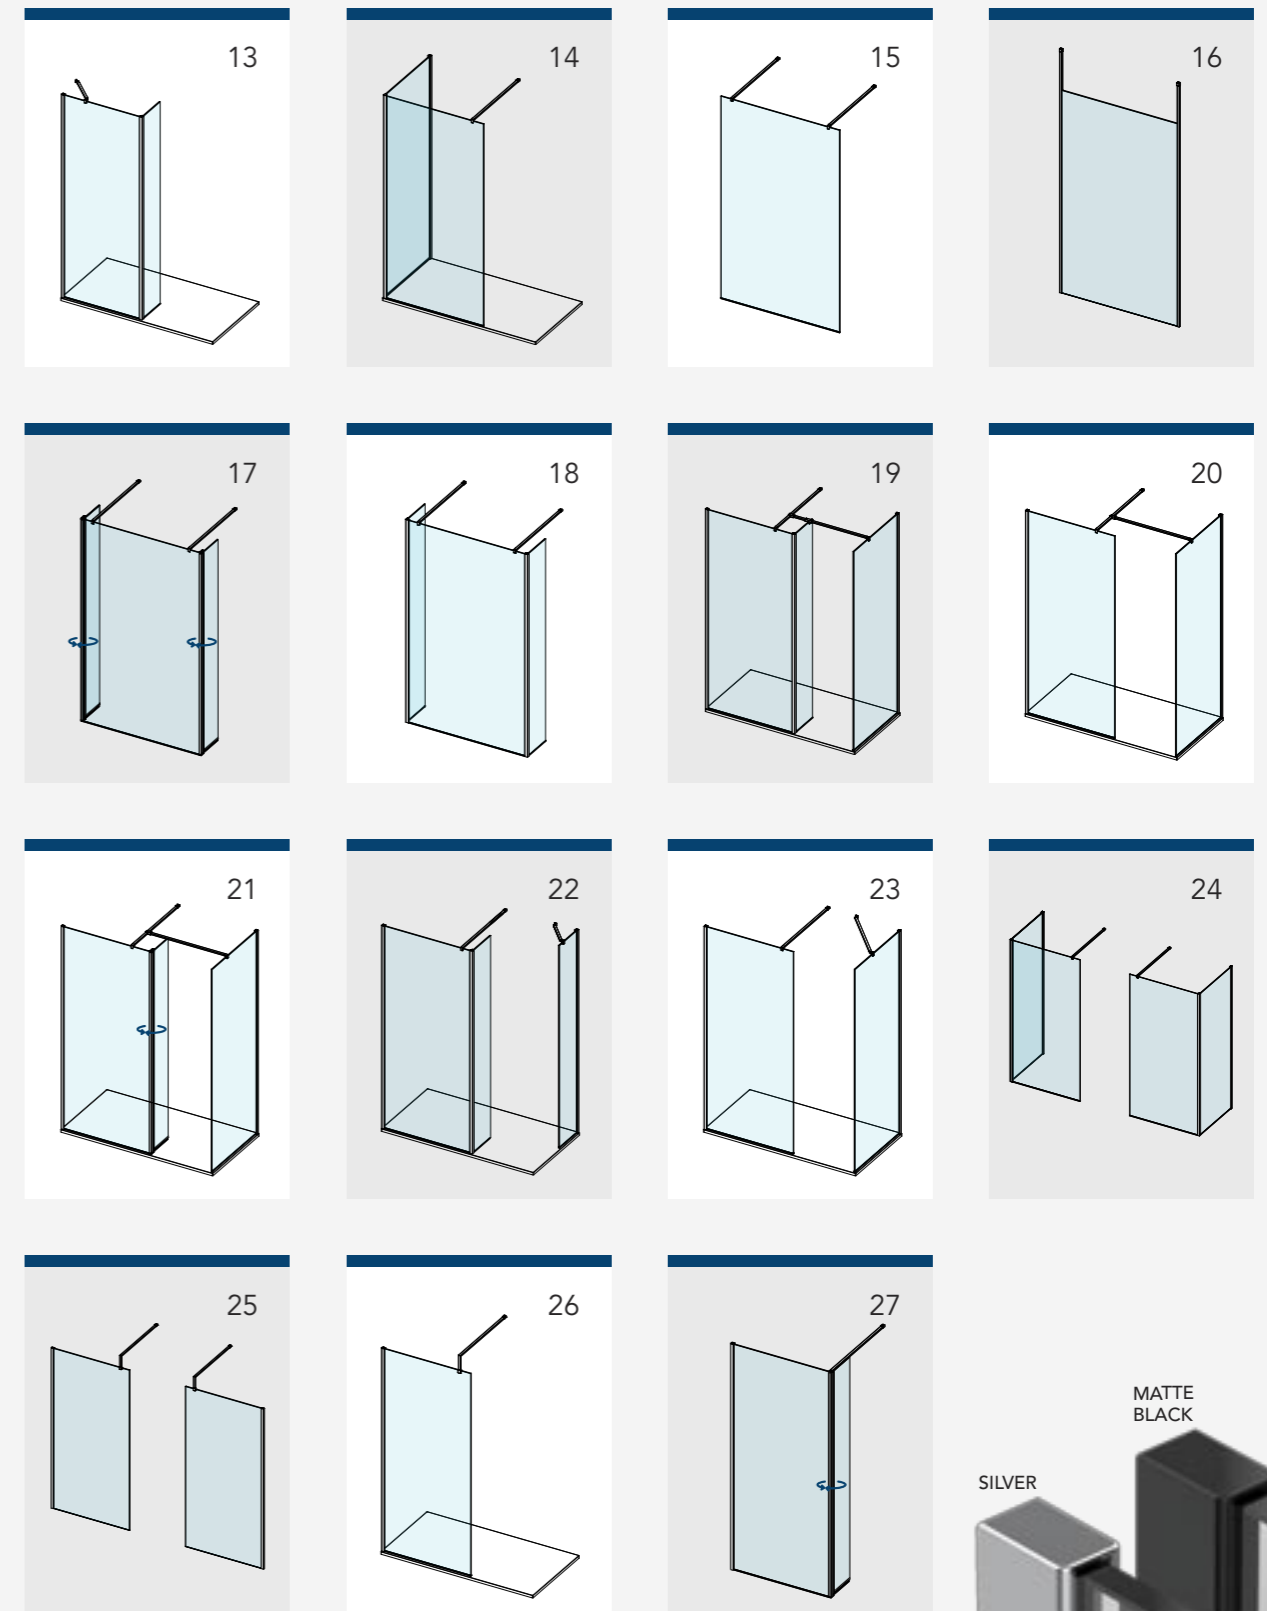

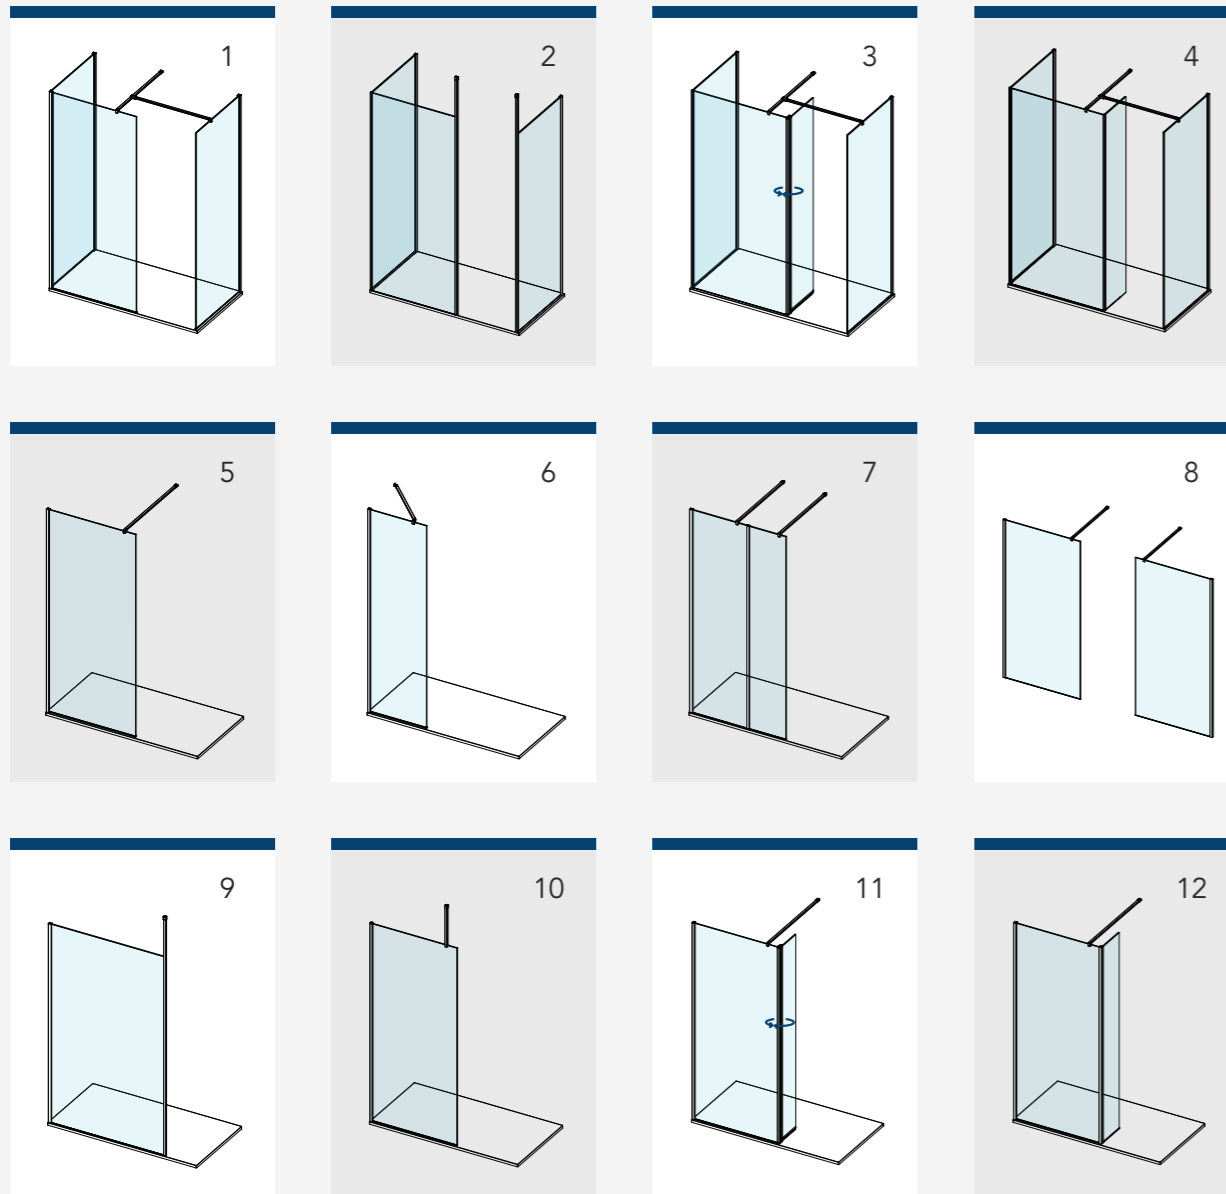

## INFLUENCED BY SIMPLE AESTHETICS

The PVD Finish extends across a select offering of AYO components that includes a 15mm Wall Profile, 1200mm Straight Stabilising Bar, 650mm Angled Stabilising Bar and T Piece.
